▼ THREE MAJOR TASKS FOR TODAY

The diagram illustrates the distribution of 1000 data points across 9 rows, labeled 01 to 09. Each row represents a different configuration or parameter setting. The horizontal axis for each row is marked with a 'total' label at the right end. The data points are represented by vertical bars of varying heights, indicating the frequency of each data point. The distribution is skewed to the right, with most data points concentrated in the middle and right portions of the horizontal axis. The bars are grouped into four distinct clusters: a small cluster on the far left, a larger cluster in the middle-left, and two clusters on the right side. The height of the bars varies significantly between the different rows, suggesting that the distribution of data points changes across the configurations.
